

Section - A (Reading skills)

J. Read the passage and answer the questions given below.

A volcano is a burning mountain with a great hole running deep into the earth. Out of it come smoke, steam, gases and stones. The mouth of the opening is called the crater of the volcano.

Volcanos are not always burning. Sometimes a volcano will remain quiet for centuries and then will suddenly burst into activity. This is called a volcanic eruption. When it does so, great clouds of steam, gas, ashes and dust are thrown up from the crater. Loud noises come from inside the mountain. After a time, white hot molten rock, called Lava begins to flow down the mountain sides. This may go on for days or weeks. Then the volcano will go to sleep again for many years. Most volcanos are found near the sea.

J. Choose the right option :
